

Comparing models i-150 en i-300

Air quality is of great importance today. Not only Co² and particulate matter, but also too high a concentration of Volatile Organic Compounds (VOCs) and viruses with their variants are very harmful to our health.

During autumn and winter months, opening doors and windows could improve air quality, providing that the outside air is not polluted with all kinds of chemicals and Volatile Organic Compounds (VOC). But Nevertheless the temperature will drop quickly and humidity increase, while heating costs will increase

The **HUMA i-150** is perfect for home office use, or when sporting and traveling in car, bus or train. The meter works on a rechargeable battery.

But for Hotels, fitness centers, fast food restaurants, businesses consisting of one or more branches or adjacent spaces, measuring the air quality must be tackled professionally with a **HUMA i-300**.

Managers have little or no time to check the information provided by the air meters. Also, depending on the size and number of rooms, different air meters will be needed to keep all zones within healthy limits.

The **HUMA i-300** sends its measurements to an App, installed on an Android or I/O platform, which, by means of WiFi, can remotely monitor its measurements 24/7 and store the data during 90 days in its internal memory, In the event of insufficient air quality, the appliance in the zone concerned will notify the system administrator by means of a push message that action must be taken to restore healthy air.

Model-i Smart HI-150

- Measures PM2,5/ PM10/ VOC/ CO2 Temperature and Air Humidity
- Mobile / works on an internal rechargeable battery
- Simplified one-button operation

Model-i Smart HI-300

- Works on mains or on a rechargeable Litium battery Depending upon circumstances
- The unit measures in real time: Co² - Particulate matter -VOC's
- Via the App and Wi-Fi you can always and everywhere monitor and manage the air quality of any Hi-300 device installed
- The Data is stored for 90 days and allows to monitor the evolution of the air quality
- Real-time push notifications will notify you when air quality deteriorates
